WEALTHTECH MGT. LTD.

SHORT MESSAGING SERVICE

(SMS) 1-WAY OR 2-WAY INTERACTIVE SOLUTIONS IN ENGLISH, CHINESE & OTHER LANGUAGE (SUPPORT UNICODE)

1. Internet to Mobile SMS

This solution is most suitable for SMS communication on a global basis.

For corporation with multi-sites around the globe, each country site can host a SMS server and relay the short messages from other countries to their local mobile phones. A web page is used for sending SMS, with country and language selection.

This solution also works for corporations with multi-sites but within the same country. In this case, only one SMS server is required.

(Assumption : SMS can transit locally on different telecom providers' network, e.g. in Hong Kong.)

2. Corporate LAN to Mobile SMS

For corporation with LAN or VPN connectivity, one SMS server can be used to send SMS from web page. Two-way interactive application can also be developed by industry applications for mobile banking, brokerage, retail, or other services.

One of the many examples, is inventory checking, the SMS message carries the part number, and the mobile application returns the inventory level.

(for interactive application development, please contact info@wealth-tech.com to discuss processing requirements.)

3. Standalone PC to Mobile SMS

SME or SOHO can send SMS en mass to clients directly from laptop/notebook without Internet connection. Greeting, reminder, confirmation or information service to groups of clients is most speedy with this solution.

Clients on the road can receive the message more conveniently than using e-mail.

4. Subscription SMS Service

WealthTech Management currently has SMS server in Hong Kong (and completed trials in Canada and USA). Other locations can be added readily depending on client needs.

We can send SMS for you to your clients as subscription service, or you can log on web site www.wealth-tech.com to send SMS to your clients directly. A username and password is all it takes. Please contact us for further details.

4. Concatenated SMS

The system can break long messages into multiple SMS messages.

5. Contact Information

e-mail : info@wealth-tech.com or call (852)-9439-1127

6. Application Example

- Stock Quotes : a brokerage house provides SMS stock quote to clients; by sending a SMS message with the stock quote, to the SMS server, the High, Low and Close of the stock price are sent back as SMS message to the client's phone.

- Alerts : Travel agents send breaking news to their tour guides when they are out of town, to keep them refreshed on current development.

- Sales Promotion : Retail shops announce to their clients on particular sales promotion.

- Remote Control : 'Keys' to unlock control, sent as SMS message, e.g. to activate remote camera and capture remote image.

- Bingo : mobile betting service with SMS.

- Account checking : mobile banking service with SMS.

- Inventory Update: check against current inventory level with part number.
